

FramBroadband

Wireless Broadband

FramBroadband is revolutionising the way users connect to the Internet with our wireless broadband service. It does not use outdated phone line technology like ADSL, and it is not adapted from a digital TV service like Cable Modems. This enables FramBroadband to offer a totally unique service dedicated purely to providing you the best possible connectivity.

Access that is 100 times faster than dial-up.

You will get Internet access at a blazing 11 megabits per second, 100 times faster than a 56K dial-up or 3G connection.

Easy to get connected

Our service uses the most popular standard for wireless networks worldwide, 802.11b technology, also called "Wi-Fi".

To get connected today visit www.frambroadband.com or call 01728 726500.
